## INFO

**Description**
red coloured jelly ready for use, particularly suitable for glazing pastry products. It keeps its extremely shining aspect also at -20°C. Ideal for products with a serving temperature of +5°C and -18/-20°C.

**Denomination**
semi-finished pastry product for decoration.

**Directions for use**
Take the necessary quantity of glaze from the bucket and mix with a hand blender until smooth and fluid, without englobing air. Take the sweet from the freezer (?18/?20°C), eliminate any surface frost, and place it on a proper grate. Cover with glaze using a spatula if necessary and remove the excess icing with a light vibration of the grate. Store in the refrigerator or in the freezer, as needed.
If a blender is not available, mix gently with a spatula, still avoiding air incorporation.
For better fluidity, you can heat the icing in the microwave up to 33/35°C or add water to the icing up to a maximum of 5%.
