Knead all the ingredients for about 15 minutes (spiral kneading machine), until the dough is smooth and well-combined.

Anyway, keep on kneading until the dough is well elastic.

Make sure that the temperature of the dough at the end of the kneading is 26-27°C.

Let the dough rest for 10-15 minutes at 22-24°C.

Divide the dough into portions, roll them up tight into a round or oval shape.

Move them onto baking trays and transfer in the proofer room at 28-30°C, with relative humidity of the 70-80%, for about 40-50 minutes.

FINAL COMPOSITION

We suggest to brush the buns with beaten egg before baking.
Bake at 220°C for about 10 minutes (for 30g buns).
