Make sure that the temperature of the dough is 26-28°C. 200g

Let rise for 12-14 hours at 22-24°C with the 70-80% of relative humidity. If the proofer room is devoid of humidifier, cover the dough with a plastic cloth. The dough shall quadruple its initial volume.

ADVICE:

- We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.
- We suggest to begin to knead at second speed and then, when at 3/4 of the kneading time, change to first speed and bring the kneading to end.
- If the temperature of the first dough is above 28°C, it will be necessary to decrease the leavening time.
- If you are using a planetary mixer with a "dough hook" attachment or a spiral mixer you will have to reduce the amount of water specified in the first dogh (we suggest you to use 2400/2250 gr)
