- adually in more than once and
- Make sure that the temperature of the dough is 26-28°C.
- Let rise for 12-14 hours at 20-22°C with the 70-80% of relative humidity. If the proofer room is devoid of humidifier, cover the dough with a plastic cloth.
- -The dough shall quadruple its initial volume.

#### ADVICE:

- -We suggest to cut out a 250g piece of dough and to put it into a 1L jug to check the pace of the leavening and verify the quadruplication of the volume.
- -We suggest to begin to knead at second speed and then, when at ¾ of the kneading time, change to first speed and bring the kneading to end.
- -If the temperature of the first dough is higher than 28°C, you have to shorten the first rising time.
- -If you use a spiral kneading machine or a planetary mixer with the hook attachment, you have to reduce the dose of water from 3300g down to 3100g in the first dough making.

		-Put in the proofer room at 28-30°C with relative humidity of about 70% for 4-5 hours, until the top of
		the dough is 1cm far from the edge of the mould. If the proofer room is devoid of humidifier, cover the
		dough with plastic sheets.
		N.B. If you want to add some flavourings to personalize your products, you can add them to the
		second dough.

#### FINAL COMPOSITION

- -At the end of the rising, leave the panettoni exposed to the air for 10 minutes until a light film forms over the surface.
- -With a small, sharp knife, make two superficial cuts to create a cross (these cuts shall not be deep and are necessary to give end product the typical and traditional shape).
- -Cut the dough under the 4 flaps while throwing and folding them back, then place a pat of butter and return the 4 flaps back to the original position.
- -Cook with the reverse cooking method, for 1kg panettone we recommend the following procedure: (step 1: 120°C for 15 minutes, step 2: 130°C for 10 min. step 3: 140°C for 10 min. step 4: 150 °C for 10 min. step 5: 160°C for 10 min. with valve open). The time may vary depending on the weight and the oven used, however it is always recommended to reach a core temperature of 92-94°C.

-As soon as they are removed from the oven, the panettoni should be placed onto the specific toothed racks and left to cool upside down for 8-10 hours at least before being wrapped in Moplefan bags.
